Environmental Responsibility

More than ever before, there is an awareness of the way that we are using up our natural resources and on the resulting impact such as climate change and environmental degradation. This translates into increasing pressure for the business to shoulder its responsibility for the environment.

Implementing ISO 14001:2015 can help your organisation to develop processes to ensure compliance to the legal requirements related to your services and products, lower uses of natural resources and raw materials, reduce energy costs and waste and mitigate the risk of environmental pollution through accidents and emergency situations. Your operation will not only be environmentally friendly, it will also be more profitable and efficient.

As a well-known global standard that symbolises environmental responsibility all over the world, ISO 14001:2015 is the path to follow. Expert training will provide you with the tools to systematically deal with your business's impacts on the environment and identify cost effective alternatives.

Level 1

EMS101

ISO 14001: 2015 introduction to environmental management systems (1 day)

Level 2

EMS201
